

WASH & CARE INSTRUCTIONS

KEEP YOUR 4 SEASONS GEAR IN SHAPE FOR
YOUR NEXT #MYCHALLENGE

I like to take a bath in a washing machine when the temperature of the water is set at a comfortable 30°C max.

You can put me in there with my teammates, as long as they have similar colors. Please put me inside out with the zippers closed to protect my skin and bleach is a no go for me. I recommend Nikwax Tech Wash as my favourite wash-in cleaner to keep the fabric in top condition. Oh yeah, keep those scary sharp velcros away from me! You can hang me out to dry in a well ventilated room. Tumble drying is not really my thing, because I want to live long to support you on your next #MYCHALLENGE!

FUTURUM

HOW CAN YOU REACTIVE MY DWR?

After a period of time, the DWR functionality decreases.
To reactivate, you can use **three options**.

1. Make sure I am dry after washing. Tumble dry me on low heating temperature for 20 minutes to reactivate the durable water-repellent (DWR) treatment on the outer fabric.
2. Make sure I am dry after washing. Iron me on the gentle setting (warm, no steam) by placing a towel or cloth between me and the iron. This will help reactive the DWR treatment on your garment's outer fabric.
3. If step 1 and/or 2 are not providing the expected result, because the DWR layer is completely worn out, I advise to apply a new DWR layer by using Nikwax TX.Direct® Spray-On. This product is easy and quick to apply and its highly Durable Water Repellency (DWR) develops on air drying.

**STAY IN
TOUCH**
